

Greenhouse gas emissions declaration

In response to climate change driven by human activity and the need for timely and responsible action, the management of **VIDEOTON Bulgarian Holdings EOOD** is proud to announce that we have successfully surpassed our initial commitment to reduce GHG emissions intensity by 50% by 2025.

In alignment with our Green Policy and as a participant in sustainability projects, we transparently report our progress and GHG emissions figures.

GHG Emissions Overview

	<i>Base Year</i> 2020	<i>Most recent Year</i> 2025
Scope 1 emissions (tCO _{2e})	11,82	7,57
Scope 2 emissions (tCO _{2e})	577,00	0,00
Scope 1+2 emissions (tCO _{2e})	588,82	7,55
Reduction Scope 1+2 CO₂ emissions (%)		98,72%
Emissions intensity reduction (%)		99,19%

The amount of emissions is calculated using the emissions calculator on Zeigo Hub, provided by Schneider Electric, based on energy and fuel consumption.

Thanks to our proactive sustainability efforts, ongoing investments in energy-efficient technologies, and the use of 100% renewable electricity, we continue to meet our commitments and achieve our GHG emissions reduction targets.

Our initial target was to reduce GHG emissions intensity by 50% by 2025.

From 2020 to 2025, we significantly exceeded this target, achieving a 98,72% reduction in Scope 1 and Scope 2 emissions and a 99,19% reduction in emissions intensity.
